At the NASA station, one drone exceeds the short-term criterion only inside a sliver 119 m long and 10 m wide, 1.2 km out along the dish's pointing direction

Wallops NEN WG1, 11.3 m dish pointed north at 5° (a low pass). One drone at 400 ft, AirTag-measured EIRP, 3 dB polarization loss, P.528 median loss, ITU-R SA.509-3 envelope. Dashed: the region if a 20 dB apportionment applied (0.07 km²).
