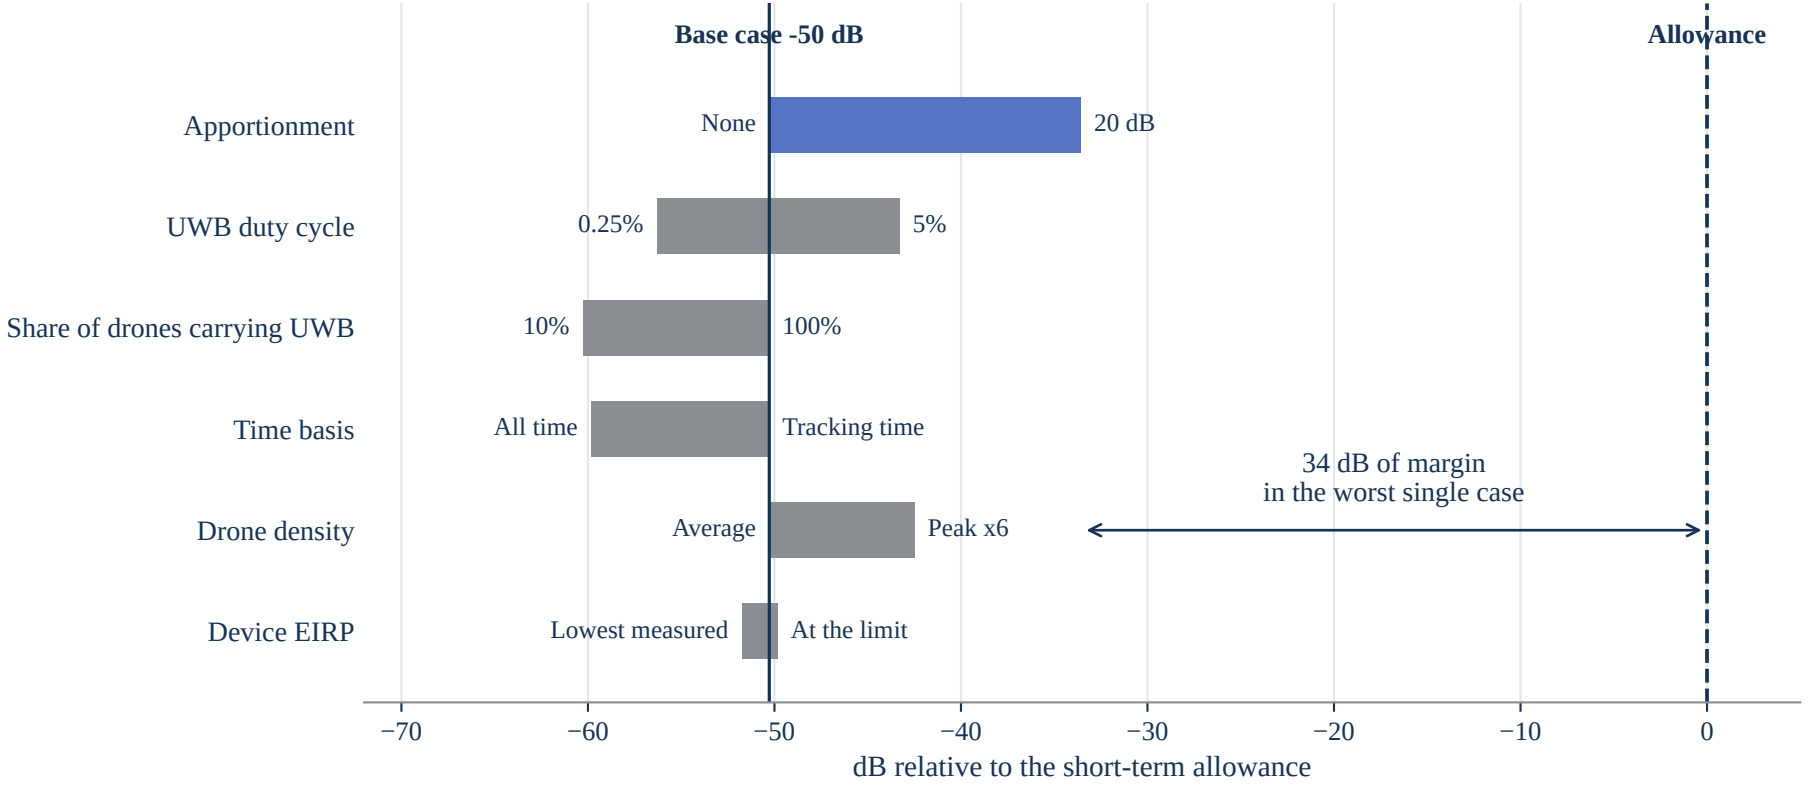
No single assumption brings the NASA station within 34 dB of the allowance

Wallops NEN 11.3 m, normal conditions (-50 dB relative to the short-term allowance). Each bar moves one input across its range and holds the others at the base case: AirTag-measured EIRP, 1% duty cycle, every drone carrying UWB, average density, tracking-time basis, no apportionment.



Source: nicklasorte/7GHz_UWB_NRPM, example_bridge_rev1.m, run of November 11, 2026 (docs/bridge_results/tornado_wallops.csv). Duty-cycle range from ECC Report 327 Table 18.
