Past 1.33 km, the beam of a 5° pass is above the 400 ft ceiling, so no drone flying under Part 107 can reach the main beam there

Wallops NEN WG1, 11.3 m, 10 m high. Filled: where one drone exceeds the short-term criterion when the dish points at 5° (blue) or 10° (gray), AirTag-measured EIRP, P.528 median loss. The short-term distance on boresight is 5.6 km, but only above the ceiling. Vertical scale exaggerated about 3 times.
